

ESTHER INGABIRE

Backend & Full-Stack Software Engineer

Kigali, Rwanda · +250 798 686 064 · esther.ingabire777@gmail.com · github.com/Esther-ingabire

PROFILE

Backend-focused engineer who builds systems end to end: REST APIs, data pipelines, mobile clients and IoT telemetry. Sole developer of ChainSight, an agricultural supply-chain analytics platform drawing deployment interest from Rwandan cooperatives and the Ministry of Agriculture, and CTO of HauxHunt, a property rental platform in development. Strongest in Python/Django and Java/Spring Boot, with working Go, React and Docker experience.

SKILLS

Languages Java · Python · Go · JavaScript · TypeScript · SQL

Backend Spring Boot · Django REST Framework · REST API design · Celery · WebSockets

Frontend & Mobile React · Next.js · React Native (Expo) · Android (Java)

Data & Infrastructure PostgreSQL · Redis · Docker · Linux · Git · GitHub Actions · AWS

EXPERIENCE

Chief Technology Officer — HauxHunt

July 2026 – Present

Property rental platform for Rwanda and Nigeria · web, iOS and Android · in development

- Own the backend architecture and API design for a multi-market rental platform covering tenant search, applications, landlord listing management, messaging, notifications and identity verification.
- Set technical direction for trust and verification, offline handling for intermittent-connectivity markets, and role-based admin access.
- Coordinate backend, frontend, mobile and DevOps work, and translate product flows into backend requirements.

PROJECTS

ChainSight — Agricultural Supply-Chain Analytics

Solo, full-stack

Django REST Framework · PostgreSQL · Redis · Celery · React · React Native · ESP32 + DHT22

- Tracks produce batches from cooperative dispatch through transport and distribution to market sale, with QR-code traceability across 8 role-based dashboards.
- Rule-based loss-risk scoring engine and an automated nightly analytics brief, fed by live GPS and cold-chain telemetry from ESP32/ESP8266 sensors.
- Being prepared for deployment after interest from cooperatives, distributors and Rwanda's Ministry of Agriculture (MINAGRI).

Rides — Ride-Hailing Backend

Backend contributor

Go · PostgreSQL + PostGIS · Redis · WebSockets · MTN MoMo / Airtel Money

- Real-time driver matching, in-app fare negotiation and live trip tracking over WebSockets for motorcycles, cabs and trucks, with mobile money payment integration.

NFC Tap-to-Pay — Android Wallet

Solo, full-stack

Android (Java) · NFC/HCE · Spring Boot · PostgreSQL

- Stores cards from several banks and pays in a single tap using host card emulation, backed by a Spring Boot and PostgreSQL service.

EDUCATION

BSc Software Engineering — Adventist University of Central Africa

Kigali, Rwanda

CGPA 17.63 / 20 · Expected graduation: November 2027

Capstone (Big Data Analytics): household energy prediction on 19,735 records; best model Random Forest at R^2 0.547 and RMSE 67.3 Wh, delivered as an interactive Power BI dashboard. Python, pandas, scikit-learn.
